performance through chemistry

Glucose Glutamic Acid
Single-Use Vial
For BOD testing:

The instructions are simple... Shake thoroughly, remove the celloseal covering the cap, unscrew the cap, pour contents, and rinse emptied vial at least 2 times with dilution water into the check standard solution. Each vial contains 6mL of the APHA specified concentration of Glucose Glutamic Acid (150mg/L of Glucose, 150mg/L of Glutamic Acid).

We know you will find that this single-use vial improves test accuracy, reduces cost, and eliminates the risk and waste of GGA contamination.
